

Congratulations on the purchase of your new Memory Foam Select or Memory Foam Select II Component Mattress!

Assembly Instructions:

1. Remove all mattress components from box or boxes and carefully remove the plastic bags.
2. Allow heat-sensitive Memory Foam to expand naturally at room temperature (72 to 76 degrees Fahrenheit)
3. This may require 3 – 7 hours, depending upon the seasonal outdoor temperature (longer in cold weather) and length of time in-transit for delivery.

CAUTION

DO NOT FORCIBLY UNFOLD OR PULL APART MEMORY FOAM. DAMAGED CAUSED BY IMPROPER HANDLING IS NOT COVERED UNDER WARRANTY.

4. Unzip the Mattress Cover and place the top of the cover upside down on a flat surface, leaving the zipper side up.
5. Place the Memory Foam (after it has fully come out to complete size) inside the open Mattress Cover.
6. Place the Medium Weight layer of Base Foam on top of the Memory Foam, lining up the edges.
7. Place the Heavier Weight layer of Base Foam on top of the Medium Weight piece just installed, lining up the edges.
8. Carefully zip bottom of Mattress Cover together. Do not force or stretch the zipper, as this may cause it to part or break.
9. Flip the mattress right-side-up and enjoy a great night's sleep!

Important Notes

You may notice a slight odor to your new foam product. This “new” smell is normal and will gradually disappear over time; and should be mostly gone within a few weeks. This odor is not toxic; rather it is the smell of a new foam product packaged in the factory before shipping directly to you.

POLYURETHANE FOAM IS FLAMMABLE. WHEN IGNITED, POLYURETHANE FOAM WILL BURN RAPIDLY, CONSUMING OXYGEN AT A HIGH RATE AND GENERATING GREAT HEAT, THICK DARK SMOKE AND TOXIC GASES. SERIOUS PERSONAL INJURY OR DEATH CAN RESULT FROM IGNITION OF FOAM PRODUCTS IN AN ENCLOSED SPACE. DO NOT EXPOSE POLYURETHANE FOAM TO RADIANT HEAT, OPEN FLAMES, SPACE HEATERS, BURNING OPERATIONS, CIGARETTES, WELDING OPERATIONS, NAKED LIGHTS, MATCHES, ELECTRIC SPARKS OR OTHER IGNITION SOURCES.
